

Comprehensive Training Insures Long Term Wireless Regional Area Network Success.

LHC2, in cooperation with GeoWireless¹, empowers network administrators and MIS managers with training and tools to support and expand their multi square mile wireless networks while insuring optimum network performance.

Intensive 5 day hands on boot camp readies network support personnel

Training: IT professionals recognize the importance of ongoing training as a way to insure that they can meet the demands of their network users. Continued advancements in IP networking have brought new services such as VoIP, RFID and wireless mobility to improve employee and asset productivity. Managing these new services requires new skills and tools.

The LHC2 technical team has many years of direct experience in the deployment and management of WRANs (Wireless Regional Area Networks). In addition this team has provided wireless boot camp training for the past 3 years certifying over 100 wireless network professionals.

Course Objectives: Students will gain a comprehensive understanding of high coverage Wi-Fi infrastructure alternatives, including mesh and base station approaches. Course emphasis on Vivato's high coverage Wi-Fi technology will enable students to confidently manage and expand existing Vivato networks utilizing advanced security, frequency planning and coverage techniques.

Course Location: LHC2 offers training in Spokane Washington. Customers with 4 or more students and existing Vivato deployments can elect to have onsite training for an additional fee.

¹GeoWireless announces agreement to provide ongoing support for Vivato Products. See (<http://www.vivato.com/press/press20060413.html>)

Vivato is a registered trademark of Vivato Inc. GeoWireless is a registered trademark of GeoWireless LLC.
